LEGRAND PRINCIPLES

INNOVATION
LED technology, high-performance products, reducing energy consumption and greenhouse gas emissions. Our commitment is to make available for you innovative solutions ensuring the safety of people.

STANDARD COMPLIANCE
We manufacture our products by applying the most stringent quality controls, complying with the requirements of standards IEC and EN 60598-2-22.

ECO-DESIGN
We take account of the environmental dimension throughout the entire life cycle of our emergency lighting units.

INTEGRATION
Attractive products smoothly integrated into the building Discreet products that disappear into the different architectural spaces while remaining visible when needed.
GUARANTEED SECURITY

Emergency lighting units with automatic testing system reduce maintenance time and costs.
Emergency lighting units are essential products that must be fully operational in order to ensure the safety of people in the event of emergency evacuation. Proper maintenance is the only guarantee of their good working order. Legrand provides you with 3 control options to suit the needs of your installation.

1. STANDARD EMERGENCY LIGHTING UNITS
   Maintenance tests have to be performed manually.

2. LVS2 AUTOTEST EMERGENCY LIGHTING UNITS
   Autotest emergency lighting units automatically carry out a weekly test for emergency mode and lamp status check and a quarterly test for battery duration check.
   The test’s result is visible on the product through 2 signalling LEDs (green and amber):
   - Green LED (on steady or blinking) : unit operational.
   - Amber LED blinking : lamp defective.
   - Amber LED on steady : battery defective.

3. LVS2 AUTOTEST & ADDRESSABLE EMERGENCY LIGHTING UNITS
   The operational status of every emergency lighting unit is continuously checked and centralized in the control interface, and displayed on background plans of the building with the new LVS2 PC supervision software.
   All emergency lighting units are interconnected to a dedicated Legrand bus line.
Low power consumption.
Longlife high performance.
Optimized light distribution.
Non maintenance required.
Standard and adjustable units.
Lumen output: 600.
IP42-IK07.
Duration: 1, 2 and 3 hours.
Opal diffuser.
Rest mode with bell button.
(DIN rail mountable.)
1 TECHNICAL SPECIFICATIONS
- Low power consumption.
- Longlife high power LED (>100,000 h).
- Optimized lighting distribution.
- Non maintained and Maintained units.
- Standard and autotest / addressable units.
- Lumen output: 70 to 350 lumens.
- IP42-IK07.
- Duration: 1, 2 and 3 hours.
- Opal diffuser.
- Rest mode with remote control unit (DIN rail mounted).

2 INSTALLATION
- Quick and safe installation.
- Translucent plug-in base for easy refurbishment.
- Automatic terminals in the base.
- Toolless snap-fit product mounting.
- Surface-mounting, slim flush-mounting, suspension and flag-mounting, with or without decorative frame, with or without vertical signalling plate.

3 STANDARDS
- Design and manufacturing certified to IEC and EN 60598-2-22 standards related to luminaires for emergency lighting.
- RoHS compliant
- PEP declaration (Product Environmental Profile).
Reduced power consumption. Longlife high performance units.

Lumen output:
IP42-IK07.

Duration: 1, 2 and 30 minutes.
Opal diffuser.
Rest mode with DIN rail mount.
# U21 LED

**LED functionality**

**Energy efficiency**

## Technical Specifications
- Reduced power consumption.
- Longlife high power LED (>100,000 h).
- Non maintained and Maintained units.
- Standard and autotest / addressable units.
- Lumen output: 70 to 350 lumens.
- IP42-IK07.
- Duration: 1, 2 and 3 hours.
- Opal diffuser.
- Rest mode with remote control unit (DIN rail mounted).

## Installation
- Quick and safe installation.
- Plug-in base.
- Automatic terminals in the base.
- Toolless snap-fit product mounting.
- Surface-mounting and flush-mounting.

## Standards
- Design and manufacturing certified to IEC and EN 60598-2-22 standards related to luminaires for emergency lighting.
- RoHS compliant
Low power consumption.

Longlife high performance.

Maintenance units.

Standard and available units.

Lumen output: 12000 lumens.

IP65-IK07.

Duration: 1 and 2 hours.

Opal diffuser.

Rest mode with 2 hours duration.

(DIN rail mounting option available.)
1 TECHNICAL SPECIFICATIONS

- Low power consumption.
- Longlife high power LED (>100,000 h).
- Maintained units.
- Standard and autotest / addressable units.
- Lumen output: 100 to 350 lumens.
- IP65-IK07.
- Duration: 1 and 3 hours.
- Opal diffuser.
- Rest mode with remote control unit (DIN rail mounted).

2 INSTALLATION

- Quick and safe installation.
- Plug-in base.
- Automatic terminals in the base.
- Flexible cable entries for rigid tubes up to Ø25 mm.
- Toolless snap-fit product mounting.
- Surface-mounting.

3 STANDARDS

- Design and manufacturing certified to IEC and EN 60598-2-22 standards related to luminaires for emergency lighting.
- RoHS compliant
- PEP declaration [Product Environnemental Profile].
Indoor self-contained emergency lighting luminaire LED

URA ONE

Non maintained and maintained LED emergency lighting units
Certified to IEC and EN 60598-2-22 standards related to luminaires for emergency lighting. High power LEDs with optimized lighting distribution (LED lifetime > 100,000 h). IP 42, IK 07. Power supply: 230 V ± 10% - 50/60 Hz. Class II. Low consumption technology
Switching power supply on maintained units. Duration: 1, 2 and 3 hours. Ni-Cd or Ni-MH batteries. Recharge time: 24 hours.
Charge monitor with a green LED
Automatic terminals with high capacity: 2 x 2.5 mm² for the electrical power supply and for the remote control circuit. Remote control terminals protected against reversed wiring with the power supply. The remote control may be used to remotely disable the emergency lighting units to avoid unnecessary battery discharge in the event of a deliberate cut in normal lighting. Plug-in back with pre-cut holes grid to ease installation and maintenance
Opal diffuser. Housing fully recyclable. Flat flush-mounting integration into false ceiling & wall with flush-mounting frame Cat.Nos 6 616 50/51
Battery discharge in the event of a deliberate cut in normal lighting. Plug-in back with pre-cut holes grid to ease installation and maintenance
Against reversed wiring with the power supply. The remote control may be used to remotely disable the emergency lighting units to avoid unnecessary
Automatic self-testing system in order to check the emergency mode
The test’s result is visible on 2 signalling LEDs (green-OK and yellow-defective)
Addressable function is activated by setting an ID on each luminaire with infrared configuration tool (Cat.No 0 626 02) and monitored on a local touch screen controller (Cat.No 0 626 01), or with the building’s plan on Legrand Vision System (LVS2) PC software (Cat.No 0 626 02)
These Maintained luminaires can also operate in Non maintained mode according to the wiring of regular lighting
These Maintained luminaires can also operate in Non maintained mode according to the wiring of regular lighting

B65LED Autotest / addressable LVS2
emergency lighting luminaires
Maintained / Non maintained (M/NM)
Autotest / addressable luminaires incorporate an
automatic self-testing system in order to check the
emergency mode
The test’s result is visible on 2 signalling LEDs (green-
OK and yellow-defective)
Addressable function is activated by setting an ID on
each luminaire with infrared configuration tool (Cat.No
0 626 10) and wiring a complementary BUS line.
Operating status of all addressable luminaires can be
centralized by the control interface
(Cat.No 0 626 00) and monitored on a local touch
screen controller (Cat.No 0 626 01), or with the
building’s plan on Legrand Vision System (LVS2) PC
software (Cat.No 0 626 02)
These Maintained luminaries can also operate in Non
maintained mode according to the wiring of normal
lighting
