

My home lighting controls

The My Home automation system provides maximum convenience with complete management of the installation using advanced control interfaces.

TRADITIONAL CONTROLS

The basic version allows users to use 1 or 2 controllers for lighting or roller shutters.
The multifunction version has additional functions such as a sound system, electric door release control, gradual on and off dimmer, etc.

TOUCH CONTROLS

These are used to switch the light on and off or to dim it via a simple touch-sensitive glass surface.
Available in 2 finishes: black and white, they provide the same functionalities as traditional controls.

1"2 TOUCH SCREEN

Depending on the programming selected this allows lighting, roller shutters, a sound system or the different scenarios to be controlled.
The functions allocated to it are displayed on its LCD screen.

LIGHTING CONTROLLERS

Installed in the consumer unit these receive controls via the BUS/SCS and act directly on loading.
They are available in ON/OFF version (1, 2 or 4 types) and with a variable control switch for all lighting types

RADIO / ZIGBEE® CONTROLS

The individual receiver/transmitter controls are directly connected to the lighting points. They can take commands from another individual or centralised Radio/ZigBee control and send commands themselves.
The centralised controls do not require any wiring. The radio controls can take a touch plate instead of the standard Arteor plate.
